

## **DMTC Diamond the cat coin on Solana (Whitepaper)**

**DMTC Whitepaper:** DMTC is the viral meme coins in Thailand, based on true story and made by Love.

### **Who is DIAMOND?**

It all started about 3 years ago in Summer of 2021, when BT (Creator) saw a stray cat outside his house.

He figured the cat might have belonged to a neighbor, He said Hello to the furry friend and moved on with his life.

Fast forward and this cat is always showing up outside in his backyard, looking into the glass door.

The cat is gray, and has diamond shaped white mark on his neck, at that moment his name, DIAMOND, was born.

BT couldn't help himself and began feeding DIAMOND whenever he came by. It took some time to gain DIAMOND's trust, but gradually, we started to spend longer and longer on the steps, loving and feeding him. It was the end of fall 2021,

BT was thinking about DIAMOND whenever the weather was bad, or he knew it would be a cold night.

With every rain and every gust of wind, he thought about if DIAMOND was safe and what he could do to help.

Finally, he realized this feeling was only going to get worse, as he had fallen in love with DIAMOND.

It was a random night in December, snowy and frigid cold, DIAMOND sat still in front of his garage door, with no hesitation BT opened the door and let DIAMOND in. Fast forward to now, it's been about 3 years, and BT thank the universe every single day for having DIAMOND in our life.

You never fully grasp how much you can love until you are solely responsible for the well-being of an animal.

DIAMOND truly is our child.

---

## **Our Story:**

Unfortunately, DIAMOND was diagnosed with FIV positive which is a viral infection that causes affected cats to have a weaker immune system in comparison with non-FIV positive cats.

The words might seem alarming “Positive for FIV”. Because people are unfamiliar with FIV, it can seem like a daunting diagnosis for potential adopters.

The myths and misconception around FIV – such as the mistaken assumption that it is a “death sentence” – might actually be more damaging than the disease itself.

That’s because these beliefs can make it harder for FIV-positive cats to find homes or even lead to unnecessary euthanasia based on outdated veterinary advice.

BT(Creator), who is a person who has been in the crypto industry and has been collecting BTC since 2016, came up with the idea during the “Bull run” period at the present that we should make a Token that will be a memorial to DIAMOND and all FIV-positive cats to make us realize that no matter what, DIAMOND will still be with us forever. Cats with FIV also deserve to live healthy and happy life in their forever home.

Then the project DIAMOND coin was born.....
